Best 200 shown

1 Fast detection of communication patterns in distributed executions
Thomas Kunz, Michiel F. H. Seuren
November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on C**

Full text available: pdf(4.21 MB) Additional Information: full citation, abstract, references, index term

Understanding distributed applications is a tedious and difficult task. Visualizations based on proc used to obtain a better understanding of the execution of the application. The visualization tool w tracer developed at the University of Waterloo. However, these diagrams are often very complex with the desired overview of the application. In our experience, such tools display repeated occur commun ...

2 Proceedings of the SIGNUM conference on the programming environment for development
March 1979 **ACM SIGNUM Newsletter**, Volume 14 Issue 1

Full text available: pdf(5.02 MB) Additional Information: full citation

3 TransformGen: automating the maintenance of structure-oriented environments
David Garlan, Charles W. Krueger, Barbara Staudt Lerner
May 1994 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume

Full text available: pdf(3.10 MB) Additional Information: full citation, abstract, references, citings, ind

A serious problem for programs that use persistent data is that information created and maintain invalid if the persistent types used in the program are modified in a new release. Unfortunately, t systematic treatment of the problem; current approaches are manual, ad hoc, and time consumir and users. In this article we present a new approach. Focusing on the special case of managing a structure-oriente ...

4 Query evaluation techniques for large databases
Goetz Graefe
June 1993 **ACM Computing Surveys (CSUR)**, Volume 25 Issue 2

Full text available: pdf(9.37 MB) Additional Information: full citation, abstract, references, citings, ind

Database management systems will continue to manage large data volumes. Thus, efficient algor manipulating large sets and sequences will be required to provide acceptable performance. The a extensible database systems will not solve this problem. On the contrary, modern data models ex order to manipulate large sets of complex objects as efficiently as today's database systems mani query-processi ...

Keywords: complex query evaluation plans, dynamic query evaluation plans, extensible databas oriented database systems, operator model of parallelization, parallel algorithms, relational datab algorithms, sort-hash duality

5 Operating System Structures to Support Security and Reliable Software
Theodore A. Linden
December 1976 **ACM Computing Surveys (CSUR)**, Volume 8 Issue 4
Full text available: pdf(3.49 MB) Additional Information: full citation, references, citings, index terms

6 Spoken dialogue technology: enabling the conversational user interface
Michael F. McTear
March 2002 **ACM Computing Surveys (CSUR)**, Volume 34 Issue 1
Full text available: pdf(987.69 KB) Additional Information: full citation, abstract, references, citings, ind

Spoken dialogue systems allow users to interact with computer-based applications such as databa using natural spoken language. The origins of spoken dialogue systems can be traced back to Arti in the 1950s concerned with developing conversational interfaces. However, it is only within the la advances in speech technology, that large-scale working systems have been developed and, in so commerc ...

Keywords: Dialogue management, human computer interaction, language generation, language recognition, speech synthesis

7 A structural view of the Cedar programming environment
Daniel C. Swinehart, Polle T. Zellweger, Richard J. Beach, Robert B. Hagmann
August 1986 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume
Full text available: pdf(6.32 MB) Additional Information: full citation, abstract, references, citings, ind

This paper presents an overview of the Cedar programming environment, focusing on its overall s components of Cedar and the way they are organized. Cedar supports the development of progra programming language, also called Cedar. Its primary purpose is to increase the productivity of p activities include experimental programming and the development of prototype software systems personal computer. T ...

8 A weighted voting algorithm for replicated directories
Joshua J. Bloch, Dean S. Daniels, Alfred Z. Spector
October 1987 **Journal of the ACM (JACM)**, Volume 34 Issue 4
Full text available: pdf(4.12 MB) Additional Information: full citation, abstract, references, citings, ind

Weighted voting is used as the basis for a replication technique for directories. This technique affo availability as well as high concurrency. Efficient algorithms are presented for all of the standard d structural property of the replicated directory that permits the construction of an efficient algorith Simulation results are presented and the system is modeled and analyzed. The analysis agrees w

9 Multidimensional access methods

Volker Gaede, Oliver Günther
June 1998 **ACM Computing Surveys (CSUR)**, Volume 30 Issue 2

Full text available: pdf(1.05 MB) Additional Information: full citation, abstract, references, citings, ind

Search operations in databases require special support at the physical level. This is true for conve spatial databases, where typical search operations include the point query (find all objects that co and the region query (find all objects that overlap a given search region). More than ten years of have resulted in a great variety of multidimensional access methods to support ...

Keywords: data structures, multidimensional access methods

10 Dynamic maintenance of data distribution for selectivity estimation
Kyu Young Whang, Sang Wook Kim, Gio Wiederhold
January 1994 **The VLDB Journal — The International Journal on Very Large Data Bases**, Volur

Full text available: pdf(1.09 MB) Additional Information: full citation, abstract, references, citings

We propose a new dynamic method for multidimensional selectivity estimation for range queries i independent of data distribution. Good estimation of selectivity is important for query optimizatio design. Our method employs the multilevel grid file (MLGF) for accurate estimation of multidimen MLGF is a dynamic, hierarchical, balanced, multidimensional file structure that gracefully adapts t distribu ...

Keywords: multidimensional file structure, multilevel grid files, physical database design, query

11 Technique for automatically correcting words in text
Karen Kukich
December 1992 **ACM Computing Surveys (CSUR)**, Volume 24 Issue 4

Full text available: pdf(6.23 MB) Additional Information: full citation, abstract, references, citings, ind

Research aimed at correcting words in text has focused on three progressively more difficult prob detection; (2) isolated-word error correction; and (3) context-dependent work correction. In resp efficient pattern-matching and n-gram analysis techniques have been developed for detecting stri given word list. In response to the second problem, a variety of general and application-specific s

Keywords: n-gram analysis, Optical Character Recognition (OCR), context-dependent spelling co checking, natural-language-processing models, neural net classifiers, spell checking, spelling erro patterns, statistical-language models, word recognition and correction

12 Searching in high-dimensional spaces: Index structures for improving the performance of mu
Christian Böhm, Stefan Berchtold, Daniel A. Keim
September 2001 **ACM Computing Surveys (CSUR)**, Volume 33 Issue 3

Full text available: pdf(1.39 MB) Additional Information: full citation, abstract, references, citings, ind

During the last decade, multimedia databases have become increasingly important in many applic medicine, CAD, geography, and molecular biology. An important research issue in the field of mul content-based retrieval of similar multimedia objects such as images, text, and videos. However, data in a relational database, a content-based retrieval requires the search of similar objects as a database system ...

Keywords: Index structures, indexing high-dimensional data, multimedia databases, similarity s

13 Parallel execution of prolog programs: a survey

Gopal Gupta, Enrico Pontelli, Khayri A.M. Ali, Mats Carlsson, Manuel V. Hermenegildo
July 2001 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume :

Full text available: pdf(1.95 MB) Additional Information: full citation, abstract, references, citings, ind

Since the early days of logic programming, researchers in the field realized the potential for explo present in the execution of logic programs. Their high-level nature, the presence of nondeterminis transparency, among other characteristics, make logic programs interesting candidates for obtain parallel execution. At the same time, the fact that the typical applications of logic programming fr computatio ...

Keywords: Automatic parallelization, constraint programming, logic programming, parallelism, p

14 Interactive Editing Systems: Part II
Norman Meyrowitz, Andries van Dam
September 1982 **ACM Computing Surveys (CSUR)**, Volume 14 Issue 3

Full text available: pdf(9.17 MB) Additional Information: full citation, references, citings, index terms

15 Distributed operating systems
Andrew S. Tanenbaum, Robbert Van Renesse
December 1985 **ACM Computing Surveys (CSUR)**, Volume 17 Issue 4

Full text available: pdf(5.49 MB) Additional Information: full citation, abstract, references, citings, ind

Distributed operating systems have many aspects in common with centralized ones, but they also paper is intended as an introduction to distributed operating systems, and especially to current ur them. After a discussion of what constitutes a distributed operating system and how it is distingui network, various key design issues are discussed. Then several examples of current research proj detail ...

16 Automatic detection and repair of errors in data structures
Brian Demsky, Martin Rinard
October 2003 **ACM SIGPLAN Notices , Proceedings of the 18th annual ACM SIGPLAN confere programing, systems, languages, and applications**, Volume 38 Issue 11

Full text available: pdf(340.56 KB) Additional Information: full citation, abstract, references, citings, ind

We present a system that accepts a specification of key data structure consistency constraints, th repairs violations of these constraints, enabling the program to continue to execute productively e crippling errors. Our experience using our system indicates that the specifications are relatively ea understands the data structures. Furthermore, for our set of benchmark applications, our system inco ...

Keywords: data structure invariants, data structure repair

17 BASE: Using abstraction to improve fault tolerance
Miguel Castro, Rodrigo Rodrigues, Barbara Liskov
August 2003 **ACM Transactions on Computer Systems (TOCS)**, Volume 21 Issue 3

Full text available: pdf(438.18 KB) Additional Information: full citation, abstract, references, index term

Software errors are a major cause of outages and they are increasingly exploited in malicious atta tolerance allows replicated systems to mask some software errors but it is expensive to deploy. T replication technique, BASE, which uses abstraction to reduce the cost of Byzantine fault toleranc to mask software errors. BASE reduces cost because it enables reuse of off-the-shelf service impl availability ...

Keywords: Byzantine fault tolerance, N-version programming, asynchronous systems, proactive replication

18 Alloy: a lightweight object modelling notation
Daniel Jackson
April 2002 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume
Full text available: pdf(346.87 KB) Additional Information: full citation, abstract, references, citings, ind

Alloy is a little language for describing structural properties. It offers a declaration syntax compat models, and a set-based formula syntax powerful enough to express complex constraints and yet automatic semantic analysis. Its meaning is given by translation to an even smaller (formally defi presents the language in its entirety, and explains its motivation, contributions and deficiencies.

Keywords: Object models, Z specification language, first-order logic

19 Improving the granularity of access control for Windows 2000
Michael M. Swift, Anne Hopkins, Peter Brundrett, Cliff Van Dyke, Praerit Garg, Shannon Chan, Mario Jensenworth
November 2002 **ACM Transactions on Information and System Security (TISSEC)**, Volume 5 Issue
Full text available: pdf(447.78 KB) Additional Information: full citation, abstract, references, citings, ind

This article presents the mechanisms in Windows 2000 that enable fine-grained and centrally mar both operating system components and applications. These features were added during the transi to support the Active Directory, a new feature in Windows 2000, and to protect computers connec the access control mechanisms in Windows NT are suitable for file systems and applications with s fall short of the ...

Keywords: Access control lists, Microsoft Windows 2000, Windows NT, active directory

20 IS '97: model curriculum and guidelines for undergraduate degree programs in information s
Gordon B. Davis, John T. Gorgone, J. Daniel Couger, David L. Feinstein, Herbert E. Longenecker
December 1996 **ACM SIGMIS Database , Guidelines for undergraduate degree programs on M guidelines for undergraduate degree programs in information systems**, Volum
Full text available: pdf(7.24 MB) Additional Information: full citation, citings
